O nama

Kompanija UNIK ima 45-godišnje iskustvo u proizvodnji konaca i jedina je firma sa Taiwana koja proizvodi svileni konac. Naše tržište je usmjeren na Taiwan i Kinu.

Sjedište UNIK-a je u vlastitoj poslovnoj zgradi u Taiwanu. Imamo uredi i u Kini za kinesko tržište. Od 2001. godine glavni ured kineskog ogranka firme je smješten u Pekingu i do sada imamo oko 70 distributera u Kini. Otvoren je i novi ured u Shanghaiu 2007. godine.

UNIK ima status GMP proizvodnje (Good manufacturing practices-dobra proizvodna praksa), dodijeljene od strane Ministarstva zdravlja Taiwana. UNIK ima ISO 13485 certifikat koji potvrđuje standard kvaliteta sistema upravljanja. Dobili smo CE certifikat za neresorbirajuće i resorbirajuće kirurške konce. Naši konci su dobrog kvaliteta, otporni na istezanje, uz povoljnu tržišnu cijenu.

Snabdijevamo javne i privatne bolnice i klinike u Taiwanu. Izvozimo preko 20 godina širom svijeta, uključujući zemlje Jugoistočne Azije, Srednjeg Istoka, Evrope, Novog Zelanda i Kine.

Proizvodi

Kirurški konci

+ Science Future

EU-TEK (PGA)

 Konac je izrađen od glikolne kiseline, a struktura konca su upredene niti. Prednosti su: minimalna reakcija tkiva, odlična sigurnost šava, predvidljiva otpornost i izdržljivost u toku kritičnog perioda zarastanja rane, bez dehiscencije rane i traumatiziranja tkiva. Konac se resorbira u periodu od 60 do 90 dana. Indiciran je za resorbirajuće šavove za meka tkiva ili ligature, uključujući i intervencije u oftalmologiji.

EU-TEK (PGA)

 Konac je izrađen od glikolne kiseline, a struktura konca su upredene niti. Prednosti su: minimalna reakcija tkiva, odlična sigurnost šava, predvidljiva otpornost i izdržljivost u toku kritičnog perioda zarastanja rane, bez dehiscencije rane i traumatiziranja tkiva. Konac se resorbira u periodu od 60 do 90 dana. Indiciran je za resorbirajuće šavove za meka tkiva ili ligature, uključujući i intervencije u oftalmologiji.

Plain Catgut

 Čisti catgut je od čvrsto uvijenih niti kolagena proizvedenih od serozne ovojnica govedih crijeva. U procesu proizvodnje niti se dobivaju pročišćavanjem, elektronskim baždarenjem i poliranjem do finih monofilamentata koji su izuzetno pogodni za manipulaciju. Indiciran je za šavove za meka tkiva ili ligature, uključujući i intervencije u oftalmologiji.

Chromic Catgut

 Kromirani catgut ima duži period resorpcije od čistog catgut-a. Producen period apsorpcije dobija se kromiranjem čistog catgut-a. Šavovi su otporniji od čistog catgut-a. Indiciran je za šavove na mekim tkivima, za što preciznije povezivanje rubova rane i u gastrointestinalnoj kirurgiji.

Monofilament Nylon

 Monofilamentni najlon je inertni, neresorbirajući sterilni konac izrađen od dugih lanaca alifatskih polimera najlona 6.6. Šavovi izazivaju minimalnu akutnu upalnu reakciju tkiva, iza koje slijedi postepeno urastanje reparatornog vezivnog tkiva. Indicirani su za šavove na mekom tkivu i/ili ligature, uključujući kirurške zahvate u oftalmologiji i neurokirurgiji.

Braided Nylon

 Pleteni najlon je inertni, neresorbirajući, sterilni konac izrađen od dugih lanaca alifatskih polimera najlona 6.6. Upletene niti olakšavaju manipulaciju prilikom šivenja, glatko i jednostavno provlačenje kroz tkiva bez redukcije ili kapilarnosti. Ovaj konac ima određene prednosti: čvrste niti sa jednakim promjerom, maksimalna fleksibilnost niti i odlična i konzistentna finoća konca i čvrstoća šava.

Unilene (Polypropylene)

 Unilen (polipropilen) (površinski ili u boji) je inertni, neresorbirajući sterilni konac izrađen od kristalnih stereoisomerova polipropilena. Konac može biti u plavoj boji radi bolje vidljivosti šavova. Indiciran je za primjenu za šavove na mekim tkivima i/ili ligature u kardiovaskularnoj kirurgiji, oftalmologiji i neurokirurgiji.

Polyester

 Polyester je neresorbirajući, sterilni, kirurški konac izrađen od polietilena. Konac je dostupan kao neobložen i obložen za povećanje skliskosti površine, što omogućava lako provlačenje kroz tkiva, olakšava manipulaciju prilikom postavljanja šavova. Indiciran je za primjenu za šavove na mekim tkivima i/ili ligature, u oftalmologiji i neurokirurgiji.

Wire

 Žičani konac je izrađen od sterilnih, otpornih na koroziju, gama-zrakama steriliziranih čeličnih vlakana. Konac ispunjava sve ulove prema U.S.P i E.P. za neresorbirajuće kirurške šavove. Indicirani su za upotrebu za ušivanje abdominalnih rana, intestinalnih anastomoza, hernija i zatvaranje grudnog koša.

Silk

 Svileni konac je pleteni, neresorbirajući, sterilni, nemutageni kirurški konac, izrađen od prirodnih vlakana sive koji se naziva fibroin. Šavovi izazivaju minimalnu akutnu upalnu reakciju tkiva, iza koje slijedi postepeno urastanje reparatornog vezivnog tkiva. Indicirani su za šavove na mekom tkivu, uključujući mikrokirurgiju i neurokirurgiju.

* USP The limits on knot-pull tensile strength apply to nonabsorbable surgical suture that has been sterilized. For non-sterile of Class I and Class II, the limits are 25% higher the tensile strength of each size. Larger than I/O monofilament class III is measured by straight pull.

** Silk (JIS Standard) listed Knot-Pulling Standard is Non-Sterile Standard.

* USP ograničenja za otpornost na istezanje čvorova primjenjuje se za neressorbirajuće hirurške konce koji se steriliziraju.

Za konce koji se ne steriliziraju kod Klase I II ograničenja su 25% viša za svaku otpornost na istezanje veću od I/O monofilamenta Klase III mjerene ravnim povlačenjem.

** Svila (JIS Standard) navedena kao otpornost na istezanje čvorova je standard za nestrilisani konac.
